

**SAVE THE REEF  
AN ARTIFICIAL DISPLAY  
SAVES THE DAY**

The coral reef ecosystem is the cornerstone of the world's tropical oceans. Its many inhabitants have long entertained and inspired us with their diversity and beauty.

For many years, living corals have been removed to decorate our aquariums. The slow growing coral reefs have been severely affected from over harvesting and environmental pollution.

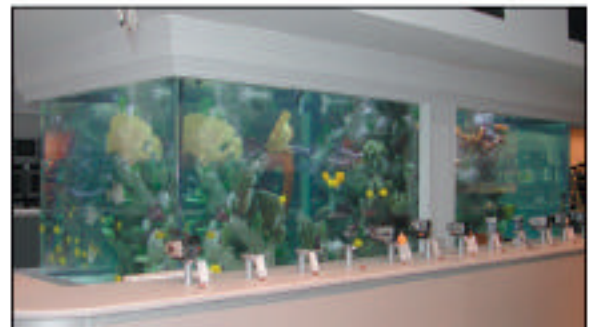

In an effort to decrease pressure on the reef ecosystem, artificial reef structures have been developed that accurately replicate the living coral reef. Made of plastic resin and flexible urathanes they provide a natural looking habitat we all can enjoy.

**JCA INTERNATIONAL, INC. COMPLETES  
INSTALLATION FOR ABT ELECTRONICS**

JCA International, Inc. has finished the installation of a 7,000 gallon aquarium located in the new Abt Electronics store. The Glenview Illinois-based retailer requested a large display aquarium for their

Audio visual department. Measuring twenty feet long, eight feet wide and six feet high the aquarium features a custom artificial coral reef covered with more than 120 handmade corals providing a realistic looking habitat for many colorful marine fish and one very large green moray eel.

Maintaining the highest water quality is paramount for this marine fish display. An extensive water recirculation system was installed to filter, cool and extract pollutants from the artificial seawater.

We are proud to add Abt Electronics to our list of clients with whom we have had the privilege to work. Other installations include the Field Museum of Natural History, Peggy Notebaert Nature Museum, John G. Shedd Aquarium, the Brookfield Zoo and the London Zoo.

Designed, and installed by JCA International, Inc.  
This Park Ridge, Illinois company specializes in custom aquatic display systems.
